

## HEAT PUMP SYMPOSIUM QUICK FACTS

### The HVACR industry is changing!

Across Canada, the heat pump is becoming the technology of choice for addressing our most pressing environmental challenges. Whether it's reducing energy costs, lowering our carbon emissions footprint, or retrofitting the building space with more efficient products, the market increasingly views heat pumps as the solution to meeting our future heating and cooling needs.

Building on the success of the inaugural 2023 Toronto edition, the 2024 Vancouver Heat Pump Symposium will be bringing together manufacturers, wholesalers, and contractors alike to discuss the latest technology, exchange valuable knowledge, and share strategies for how the industry can grow during this exciting time of transition.

The 2024 Vancouver Heat Pump Symposium will be a dynamic day with training, education, exhibitors, equipment and networking.
